

PRESS RELEASE

InterLab – new member of the AUTOSAR partnership

Ratingen, Germany, 22 August 2008: InterLab® has joined the AUTOSAR (Automotive Open System Architecture) partnership as associate member.

The AUTOSAR partnership, an alliance of manufacturers and suppliers, is establishing an industry standard for automotive E/E (electrical/electronic) software architecture. It will serve as a basic infrastructure for the management of functions within future applications and standard software modules.

The InterLab Software System enables the efficient and seamless requirements verification management for complex high-tech products. InterLab bridges the gap between requirements management and test execution and can easily be integrated into existing processes and connected to corresponding systems

The automotive E/E sector is characterized by complex product structures and distributed development cycles. Efficient requirements management, including process continuity and traceability, are key factors when it comes to fulfilling certain standards whilst meeting cost and time-to-market targets at the same time. "InterLab is ideally suited to support these demands", says Tasniem Jawaid, Director Strategy and Business Development of InterLab. "The InterLab Software System can help providing seamless solutions that allow the continuous proof of AUTOSAR conformance from abstract requirements through to precise, individual test results of standardized modules, applications and end products. By participating in the AUTOSAR partnership we can support the automotive industry with our detailed know how about standardization processes as such and how best to ensure compliance to such standards."

About us

InterLab is a self-contained business unit of 7 layers AG that develops and markets the InterLab Software System in all industrial sectors with complex product structures. The InterLab Business Unit is situated in Ratingen, Germany, close to Duesseldorf Airport. (www.interlab.com)

7 layers AG is part of the globally operating 7 layers group of Test and Service Centers for the wireless communications industry. 7 layers offers test services, certification and qualification procedures as well as product validation. Additionally 7 layers provides engineering services, supporting the efficient development of standardized products and test set ups. 7 layers has locations in Germany, China, Korea, Taiwan, Japan and USA.
